IPL – Permanent Hair Reduction

The IPL (intense Pulsed Light Therapy) hair removal procedure produces a high intensity flash of filtered light from the applicator head, which is placed in contact with the skin. The energy from the light source is absorbed by the pigment melanin, which gives the hair its colour. The hair rapidly absorbs this filtered light and transfers it to heat in the surrounding cells, raising them to a temperature of 70 degrees centigrade or more. The heating denatures the cells making them incapable of further hair growth.
